

APPENDIX 1: SURVEY REGARDING YOUR SATISFACTION OF YOUR ANIMAL'S POST-OPERATIVE MANAGEMENT

This questionnaire is part of a retrospective study on post-operative complications of two surgical techniques that can be performed on animals with a painful and blind eye : the enucleation and the evisceration with intra-scleral prosthesis. The animal's care in the post-operative period and the owner's satisfaction regarding the esthetic outcome are some data included in our study. This is why, since your animal has undergone one of the procedures in the previous years at the Centre Hospitalier Universitaire Vétérinaire of the Faculté de Médecine Vétérinaire of the University of Montreal, we come to you with this survey.

1. Have you had to consult a veterinarian following a complication related to the procedure?

- ☐ Yes
☐ No

If yes, select the complications that happened in your case :

Enucleation

- ☐ Discharge
☐ Wound infection
☐ Pain
☐ Sinking of the skin in the orbit
☐ Other

Evisceration

- ☐ Corneal Ulcer
☐ Dry eye
☐ Wound infection
☐ Abnormal ocular discharge
☐ Pain
☐ Other

If other, specify the nature of the complication :

2. At what level are you satisfied with your animal's appearance after the procedure on a scale of 1-10 (1 being not satisfied at all and 10 being 100% satisfied)?

1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	----

3. Considering your animal's evolution after the procedure, is it a procedure that you would recommend to an owner that has an animal in the same situation as yours?

- ☐ Yes ☐ No
